LIBRARIES:
A Place for SPACE!
Interactive STEM Workshop for Librarians*
March 15, 2019 Eagle Public Library 9 am - 4 pm

This fast-paced, interactive 6-hour workshop will provide many easy-to-use activity ideas to support STEM in your library. At the end of the workshop and a trip to the local store, you’ll be ready to blast-off!

Registration is on a first-come, first-served basis

Lunch is on your own, Noon - 1 pm

Refreshments provided

This workshop is sponsored by the Idaho Commission for Libraries, and funded by a grant from the Institute for Museum and Library Services

Fee: No cost

Open to Idaho public and school library staff

Maximum number of participants: 60

To Register:

WORKSHOP DESCRIPTION
Libraries: A Place for SPACE

Explore the Sun-Earth-Moon connection! Understand the difference between stars, planets, and moons. Investigate how phenomena we see in the daytime and nighttime sky are evidence of our Solar System in motion. Make a UV detector that shows when you’re being exposed to ultraviolet energy from the sun. Create beautiful artwork using the sun’s energy. Craft an earth model while exploring wind and weather. Make moon craters and a glow-in-the-dark moon phase book. An easy-to-make Star Finder will show you where to look for constellations, any time of night, any time of year. String together a Solar System Scale necklace to wear home. Try all these activities and more as you make your library a place for Space!

Facilitator: Laurie Bone, A Space for STEM, Clio, Michigan
